

New Year, New Beginnings: For Your Lawn and Landscape, That Is.

There are a lot of details and preparations that go into making your lawn and landscape shine, and winter is when we lay the foundation for the year ahead.

**If Your Landscaping Seems Tired or
You're Just Ready for a Change, Give it a Makeover!**

There are Many Ways to Revive Your Outdoor Space:

- **Fresh Mulch:** Retains moisture in the ground for your plants and helps regulate ground temperature in summer and winter. A thick layer of mulch also deters spring weeds and helps create a polished look to be the envy of the neighborhood. We can offer a variety of mulches and colors!
- **Pine Straw:** Pine straw creates a clean appearance and is relatively inexpensive. The best time to refresh pine straw beds is after the last of the leaves have fallen.
- **Planting Shrubs & Trees:** Fall and Winter is a great time to plan out a new Landscape Design or Refresh an old tired bed, talk with us today on how we can help bring life and color back into your landscape. We will work with you to create a tailored plan and talk about the best time to plant the new landscape.

Many of our plants are winter hardy and can be planted year-round.

New mulch instantly improves appearance and curb appeal and can increase the value of your home

Winter Lawn Healthcare

Carlito says:
For a healthy lawn,
keep the leaves off
the grass!

**Lawn care doesn't end with
the warm weather, in fact
it's just getting started!**

**Q: So what does my lawn need in the winter?
How do I know when it should happen?**

**A: Good News! If you have a Complete Maintenance Plan
or our Turf Care Plan, we take care of the details for you!**

Upcoming Lawn Treatments:

- **Winter Fertilization (Nov-Dec):**
Cool season lawns like Fescue receive a winter application of fertilizer to prepare the lawn for winter and encourage continued root growth in addition to maintaining a green appearance.
- **Crabgrass Prevention (Pre-emergent) & Fertilization (Jan-Mar):**
This spring combo application is one of the most important of the season. The fertilizer feeds the grass at a key time and Crabgrass Prevention will create a barrier preventing summer weeds (like Crabgrass) from germinating and appearing in the summer months.
- **Winter & Spring Weed Treatments:**
Cooler temperatures limit the effectiveness of weed treatments, so we closely monitor the weather and soil temperatures to time weed treatments to ensure the most optimal outcome for a healthy lawn.
